

WADA publishes 2014 Prohibited List

Montreal, September 26, 2013

Following approval by the World Anti-Doping Agency's (WADA) Executive Committee on September 11, the 2014 List of Prohibited Substances and Methods is now available.

Noteworthy changes to the List, which will come into force on January 1, 2014, include:

IN – AND OUT-OF COMPETITION

Use of International Non-proprietary Names (INN)

With the assistance of the World Health Organisation, the nomenclature of some substances on the List has been updated to International Non-proprietary Names (INN). For ease, however, previous names have been maintained and no substance has been deleted.

S1. Anabolic Agents

To ensure clarification and accuracy, changes were made to the definitions of "exogenous" and "endogenous"

S2. Peptide Hormones, Growth Factors and Related Substances

As made clear through points S2.2, S2.3 and S2.4, Releasing factors are prohibited. Furthermore, other prohibited growth factors are listed separately.

S5. Diuretics and other Masking Agents

Vasopressing V2 antagonists (vaptans) were added as an example of a diuretic subclass.

M1. Manipulation of Blood and Blood Components

For the purpose of scientific accuracy, the term allogenic was introduced.

IN-COMPETITION

S6. Stimulants

Some drugs that metabolize to amphetamine or methamphetamine have been reclassified because improved analytical techniques permit the identification of the administered drug and corresponding metabolites; MDMA and MDA are reclassified because they are now recognized as less likely to be used as doping agents; cathinone and its analogues (e.g. mephedrone, methedrone, a-pyrrolidinovalerophenone) and trimetazidine have been added as examples to reflect emerging patterns of drug use.

IN PARTICULAR SPORTS

P1. Alcohol

In the interest of accuracy, changes were made to the wording describing the blood alcohol threshold. In addition, "Aeronautic" has been replaced by "Air Sports", and "FITA" has been replaced by its new acronym "WA" (World Archery).

P2. Beta-blockers

"FITA" has been replaced by its new acronym "WA" (World Archery).

Monitoring Program

In order to detect potential patterns of abuse, mitragynine has been added to the Narcotics class of the Monitoring Program.

Mobile-friendly formats

In an effort to provide stakeholders with tools to support anti-doping activities and following the successful iPhone application introduced in 2011, the 2014 Prohibited List will again be available on iPhone and other mobile devices as of January 1, 2014.

In addition to English, French and Spanish versions of the List, it is also possible to translate the List into other languages.

Stakeholders who wish to translate the List can do so by November 1, 2013 and send WADA the new version to be inserted in the mobile-friendly platforms at minimal cost.
